THE PRODUCT DECISION

Help sellers choose the next useful conversation.

Audience: a sales leader or account executive evaluating SalesPlay. Conversion goal: earn a scoped pilot on their own accounts.

THE PROMISE

Find an account worth investigating, understand why your product may fit, and prepare the first conversation. Specialist market intelligence should improve that decision while the interface stays simple.

The problem with the previous approach.

The earlier journey placed market reasoning, a seven-input factory capacity model, and a long discovery brief before the seller could act. That asked the seller to do work belonging to a later technical assessment. A live customer demo should demonstrate relevant account choice first.

Primary user need	New behavior
Who deserves my attention?	A short account list with a specific reason to investigate, possible fit, and an open question.
Why should I trust the recommendation?	Three plain-language facts with sources available on demand. Distinguish industry context, account evidence, and inference.
What should I do next?	A relevant buyer role, a short editable opening, and three discovery questions.
What if my account information is different?	Buyer feedback changes the fit and marks earlier saved plays for review.

A narrow initial customer.

Start with sellers of a defined industrial equipment product in one territory. In the example, Aster Automation sells robotic equipment that assembles laminated transformer cores. SalesPlay is the product being evaluated; the transformer manufacturer is the seller's prospective account.

The opportunity hypothesis is worth a conversation, not proof of budget, buying intent, or a technical benefit. The current workspace contains fictional records and simulated specialist research.

THE LIVE DEMO

One clear story, in about four minutes.

Open the sample workspace with a clean shortlist. Use the account-specific facts, not a feature tour, to carry the conversation.

Moment	What to show	What to say
1. Orient	Seller context and two account choices.	“Imagine this is your product and territory. SalesPlay helps your team decide who to contact next.”
2. Make it relevant	Ridgeway: why now, why it may fit, check first.	“Here is an account to investigate. Notice what we know and what still needs a buyer conversation.”
3. Explain the reason	Open Ridgeway’s three facts, then one source.	“Research narrows the market; account evidence suggests a fit. The need is still a question.”
4. Enable action	Role, short opening, three questions. Edit, review, and save the play.	“Your seller leaves with an opening they can use and a question worth asking.”
5. Show judgment	Record “Core assembly is outsourced.” Open saved plays and account list.	“That fact changes the fit. We stop this equipment approach and review a different account.”
6. Earn the pilot	Open “Try with your accounts.”	“Would it be useful to evaluate this with five of your accounts and compare it with your current research?”

THE SIGNATURE INTERACTION

A buyer says the manufacturing step is outsourced. The account no longer fits the equipment. The shortlist, next action, and saved-play review state change together. This demonstrates useful judgment without requiring a factory calculation.

Keep deeper material optional.

Open sources when trust needs support. Discuss technical capacity, economics, integration, and analyst operations after need is established. The first demo should not depend on the customer knowing factory throughput or contribution margins.

CONVERSION AND MEASUREMENT

Earn a pilot with an agreed scope.

Proposed evaluation: one product line, one territory, five named accounts, an evaluation owner, and a review date. Timing and access must be agreed at kickoff.

THE CUSTOMER ASK

“Let’s try this with five of your accounts. We will compare the account choices, the evidence behind them, and the usefulness of the first conversations with how your team works today.”

Agree together	What to establish
Scope	One product line and territory; five distinct companies. Include familiar accounts so the customer can challenge the output.
Research access	Confirm entitled data, applicable segment coverage, source freshness, and account context before promising deliverables.
Review material	Account recommendations, reasons and sources, fit exclusions, and reviewed conversation plays.
Ownership and timing	Name an evaluation owner and a review date. A two-week evaluation is a proposal, not an activated trial.
Success criteria	Would a seller act on the account or new reason to revisit it? Is the reasoning correct and traceable? Is the opening useful?

Separate interest from product value.

A customer requesting a pilot is a conversion signal. Product value requires evidence: relevant opportunities, accurate reasoning, useful conversations, and a sustainable research cost. Do not use sample data to claim pipeline or revenue lift.

The prototype’s conversion behavior.

The pilot planner produces a local worksheet after the user supplies exactly five distinct company names. It does not transmit the account list, run research, book a meeting, activate a trial, or create a commercial commitment. The presenter agrees the next step with the customer.

Proposed usability checks: a new viewer can explain the product and next action within 10 seconds; a seller can reach a useful opening within 90 seconds without entering factory data. These targets require user testing and are not observed results.

RESEARCH ADVANTAGE AND BOUNDARIES

Keep the intelligence deep and the decision understandable.

The potential MarketsandMarkets advantage remains the quality of its research, maintained market relationships, and analyst expertise. The interface should make their contribution visible at the account level.

Demonstrate a useful connection.

Broad electricity demand creates an industry reason to investigate. A specialist segment map could narrow the search to the relevant transformer applications and core-production processes. Account evidence supplies a possible match. A buyer conversation validates the need. The prototype illustrates this chain using synthetic research and account records.

Prove the advantage in the pilot.

Hold the model, account context, and workflow constant. Compare public research with public research plus entitled MarketsandMarkets intelligence. Blind reviewers assess useful novelty, specificity, correctness, and buyer-confirmed need, alongside analyst effort. If the results are equivalent, the research advantage remains unproven.

S1 DOE: Strengthening America’s Grid Supply Chain

Industry demand and manufacturing constraints; published 10 Aug 2026.

S2 LAE: Robot Stacker

Public vendor description of laminated-core stacking equipment.

S3 SalesPlay: Spot Opportunities Agent

Already describes opportunity discovery, product matching, and business cases.

S4 MarketsandMarkets: KnowledgeStore

Public positioning for analyst-curated research and market interconnections.

SAMPLE WORKSPACE

Every seller, account, process record, research sample, and buyer response is fictional. Public sources establish context only. No live AI, licensed research, contact enrichment, CRM, or outreach is connected. Icons: Phosphor Icons, MIT license. Public materials reviewed 19 October 2026.
